Da Nang City - 50000, Vietnam

## Research Interest

My research interests focus on robotics, embodied AI, and multimodal learning. I am particularly interested in building intelligent robotic systems that can perceive, reason, and interact with complex real-world environments through vision-language-action models and representation learning.

## Education

- **Vietnam - Korea University of Information and Communication Technology** *Sep 2021 - September 2026*
  *Software Engineer - Global Program* Da Nang, Vietnam
  - Present:
  - Present: Completed all graduation requirements and currently awaiting degree certification.
  - GPA: 3.54/4.00.
  - TOEIC: 810.
  - Awarded Academic Scholarship for 5 Consecutive Semesters

## Experience

- **AI VIETNAM** *Jun 2024 - Present*
  *Teaching Assistant* Remote
  - Supervised by Dr. Quang Vinh Dinh.
  - Teaching Assistant in course AIO2024, AIO2025: Including lesson design, documentation, code implementing, making slides, and presentation.
  - Team leader of Computer Vision research group (8 members) established on *Dec 2024*.
- **Dept. of Drug Design and Pharmacology (ILF), University of Copenhagen** *Oct 2024 – Dec 2024*
  *Research Assistant* Remote
  - Collaborated on research with Dr. Nguyen Trinh Trung Duong.
  - Working on a project: ***Drug Repurposing apply GNN***.
  - Utilizing Knowledge Graphs and Deep Learning, The aim is to identify alternative uses for existing drugs by integrating and analyzing biomedical data through advanced Machine Learning techniques and graph-based representations.
- **King Mongkut's University of Technology North Bangkok (KMUTNB)** *July 2024 - August 2024*
  *International Research Internship* On-site
  - Supervised by Prof. Sunarin Chanta and Prof. Ornurai Sangsawang
  - Working on ***An analysis of the optimal travel patterns for urban rail routes by reducing congestion and the number of transitions: Lessons from the French railway system*** project.
  - Research on optimizing multi-objective problems.
  - Proposed the new Tabu Search algorithms solution for Multi-Objective problems.
- **Danang International Institute of Technology (DNIIT)** *Jun 2023 - August 2023*
  *Research Internship* On-site
  - Working on ***DoNaAI project: AI system for waste classification***.
  - Reading paper, understand the algorithm of existing methods.

## Publications

- **IMA: An Imputation-based Mixup Augmentation Using SSL for Time Series Data** *July 2024 - December 2024*
  *Time Series Forecasting - Data Augmentation*
  - Authors: **Nha Dang Nguyen**, Dang Hai Nguyen, Khoa Tho Anh Nguyen.
  - Progress: Accepted by **AAAI'25 Workshop - AI4TS**.
  - Research Topics: Long-term Time Series Forecasting, Data Augmentation, Imputation, Mixup, Self-Supervised Learning.
  - Objective: Proposes a method for data augmentation in long sequence time series forecasting, called Imputation-based Mixup Augmentation (IMA).
- **Metaheuristics for Multi-Objective Hub Location Problem** *July 2024 - November 2024*
  *Advanced Algorithms With Optimization Problem*
  - Authors: **Dang Nha Nguyen**, Van Nam Pham, Sunarin Chanta and Ornurai Sangsawang.

- Progress: Accepted by **Journal of Industrial Engineering and Management (JIEM)**.
- Research Topics: Maximal Covering Location Problem (MCLP), p-Hub Median Problem, Uncapacitated Single Allocation p-Hub Median Problem (USApHMP), Meta-Heuristic Tabu Search, and Multi-Objective Optimization.
- Objective: Proposed policies for managing congestion and delays around stations and improving service at transit points.

- **Toward an Intelligent Maps Construction Framework: A Case-study of VKU Campus Map** *April 2023*
  *Software Application*
  - Authors: Vinh Van Thanh Nguyen , **Dang Nha Nguyen**, Hoang Trung Le Kim and Thanh Tuan Nguyen.
  - Progress: Accepted by **CITA 2023** Conference.
  - Research Focus: Developing an advanced software system for the Vietnam - Korea University (VKU) campus that integrates 2D and 3D mapping technologies to create a comprehensive digital map. This system aims to provide detailed, interactive visualizations of the campus environment.
